Bandwidth: RTPnet is on an optical connection to the Internet at 10 Mbit per sec. While there are no current limits on bandwidth or database usage, we reserve the right to impose them if any RTPnet member's usage starts to affect the overall availability of the system.

- Internet services for RTPnet: The RTPnet server is colocated at [Deltaforce Technologies](#), thanks to [Amnon Nissan](#) <amnon at deltaforce.net>.

- Service availability: RTPnet is on a UPS and generator, with roughly 99.9% availability.
- System backups: Users are responsible for maintaining backup copies of their Web sites. RTPnet does nightly backups.

- System software and hardware:
RTPnet (rtpnet.org, rtpnet02.rtpnet.org, and www.rtpnet.org) is running: [Apache 2.0](#)

[Mailman](#)

[MySQL 5.0.60](#) Perl DBI

[PHP 5.2.6](#)

[phpBB](#)

[Gentoo Linux](#)

on a P-4, 2.6Ghz, computer with 1GB of RAM, 160GB HD, on an Uninterruptable Power Supply (UPS).

Software and instructions

- General instructions: What you need to get started — [Creating and Maintaining World Wide Web Pages on RTPnet](#)

- Calendars:
 - **Calendars Net:** [Calendars Net](#) is a free interactive Web calendar-hosting service.
 - **Flat Calendar:** You can download the [Flat Calendar](#) .php files to your Web space on rtpnet.

- Data collection forms:
 - **PHP Script:** [script](#) compiles form data to an email message.

- Domain hosting: RTPnet provides virtual hosting for your domain, for example, www.your_group_name.org. You are responsible for the registration for your domain name. We recommend using register.com through Deltaforce.net. See [Domain Services/Virtual Hosting on RTPnet](#) for more information.
